

The profile of India's defences against natural and man-made calamities, including fight against terrorism and natural hazards which are the most unexpected and strike lethal blows, is seeing a major sea-change.

The security mechanism to address civil defence and disaster mitigation is going through a paradigm shift. Private security personnel are turning to be the defenders and custodians of hi-tech installations and operate like Para-military forces on war footing. With the turn of the millennium, the role of the security agencies have diversified from vigilance and guarding, to intelligence and investigation, crime detection and mob management, VIP security to anti-terrorism, industrial safety to disaster mitigation.

Today, it is imperative to look into the scenario as homeland security and this workshop addresses on how to deal with the concerns of tomorrow. The details are given here with the enrollment form.

WHO MUST BE THERE!!

The Workshop is aimed at Senior Managers and HODs in the areas of Security, Safety, Disaster, and Hazard Management. The professionals participating maybe from the service providers, stake holders and the clientele segment of
